

Reliability meets affordability - built into your machine

Custom alarm thresholds can be programmed for your specific machine

Includes built-in intelligence to avoid false alarming

Performs assessments every 3 hours

Provides early indication of bearing degradation

“Sleep/wake up” function extends battery life

Use of filter bands with proven SKF Enveloped Acceleration results in highly reliable indications

SKF Machine Condition Indicator – a simple and low cost way to add condition monitoring capability to your products

The SKF Machine Condition Indicator is an ideal addition to your existing pump, fan, gearbox or motor products, delivering added value to your customers and opening opportunities for additional service opportunities.

Simple to install and use, this device will give your customers easy-to-understand information that will enhance maintenance operations.

More intelligent than conventional sensors, the SKF Machine Condition Indicator is a smart device that can be customized for your needs. It takes measurements, verifies alarm conditions and displays asset status via three multi-colored LEDs.
